

Log Bench

Installation Instructions

NOTES: Please check for any damage caused by the shipping company and take appropriate steps to file a claim, if needed.

*Please call **Digsafe** and check for any underground utilities before digging anywhere.

Materials needed

Shovel, measuring tape.

Instructions

1. Carefully remove element from the pallets/packaging. You should find one (1) Log Bench and two (2) log bench feet.
2. Move items and tools to desired installation location.
3. Mark the length of the log in the desired location measure in 6-12" in from ends. Dig a shallow (3" +/-) x the length of the support feet parallel to each other. Set the support feet in the trenches with the notches facing up and wiggle them to make them firm.
4. Set the log into the notches again wiggling to sit firmly.
5. Minor adjustments like rotating the top log or making a trench deeper may be required to stabilize the top log.
6. Part of the allure of the log bench is that it moves a little. If you require more permanent installation the top log can be fastened to the "feet" or even the feet can be re-barred to the ground first.
7. Enjoy your Log Bench!
