Giant Ladder

MRCF-GL

Shipping Weight: lbs
Shipping Dimensions: "L X "W X "H
Brand: Natural
Toxicity: child friendly wood preservative
Age Appropriateness: all ages

As you can see from the photo, the Giant Ladder Is designed to enhance motor coordination, which is the ability to use different parts of the body together smoothly and efficiently by encompassing both gross motor skills (large movements) and fine motor skills (small, precise movements).

This is a perfect fitness activity for middle and high school students. When they get to the top, they can swing around to, and come down, the other side, or go up and over the top.

The ladder “rails” are spaced about 25 inches apart, and the whole structure is 5’ wide and 8’ tall.

Comes as a kit that can be installed permanently in ground, or we can make it free standing for temporary or movable installation if you order the A-frame supports.

Complete and easy assembly and installation instructions are included.

For schools and public playgrounds, a 6’ fall zone all around would be required.
